Admin Menu | Morning Scroll | Sources

Sunday, November 1, 2026 — the day's news on the subjects on Clay's list. Stories are from October 29 to November 1, 2026, from the named source list, and each story is carried once across the four days.

New breakthroughs in AI and its uses

Up to 5 stories. 5 found today.

An exclusive conversation with the developer of REA, the viral AI reverse engineering tool

Scientific American — October 30, 2026

- REA (Reverse Engineer Anything), by pseudonymous developer Morluto, lets AI agents pull apart compiled software and reconstitute it; its community has used it on printers, televisions and cars, and the project has more than 400,000 GitHub stars.
- REA provides the pipelines that let an AI agent orchestrate Ghidra (the NSA-developed tool) and other reverse-engineering programs on its own; before 2026 decompilation was the domain of a select few experts, now nearly anyone can do it.
- Experts warn it poses a crisis for trade secret and copyright law, and that amateurs modifying device firmware could cause real harm; OpenAI and Anthropic have reportedly blocked some REA use.

The Smartest People in AI Believe This Is the World's Most Important Chart

The Wall Street Journal — October 31, 2026

- AI labs say they are seeing early signs of "recursive self-improvement" — AI building smarter AI — which Anthropic calls "closing the loop."
- Anthropic's chart, built by Claude agents reviewing 15,000 internal R&D tasks, shows AI led none of that work a year ago, 1% in March, and 26% by August, with a human still supervising and 0% done entirely by AI.
- Anthropic co-founder Jack Clark has shortened his timeline, now expecting full recursive self-improvement in 2027 rather than 2028; CEO Dario Amodei warns it must be pursued "very carefully, if at all."

Foxconn working on a new tie-up with OpenAI, says there is no AI bubble

Reuters — October 30, 2026

- Foxconn chairman Young Liu said he met OpenAI CEO Sam Altman and a collaboration is in the works, building on last year's deal to design data-centre racks and AI hardware; Liu said the AI industry is not in a bubble.
- More than 10 humanoid robots have been deployed at Foxconn's Texas facilities for internal use, with plans to extend deployment beyond Texas.
- Foxconn Industrial Internet introduced two wheeled robot models in October and is developing AI models for humanoid robots based on Nvidia's GR00T foundation model. The headline link goes to a carrier page carrying the Reuters report.

This tech company just released an AI-powered candle for $150

USA Today — October 30, 2026

- Arduboy released the "AIcandle" for $149, described as the world's first AI-powered candle, using a neural network of 144 LED lights to replicate a realistic flame, with

no fire, smoke, wax or wick.

- The candle was trained on phone recordings of a single candle in a dark room, using an agentic LLM to train its neural network; it can also show the time, the game Breakout, notifications and a rain simulation, and runs entirely on its internal circuit board (no Wi-Fi).
- The 10-inch candle is backordered at least a month after a few dozen sold from an initial stock of 10; CEO Kevin Bates called it a conversation starter meant for AI and tech enthusiasts.

Joe Mazzulla elaborates on how he uses artificial intelligence to help Boston Celtics

USA Today — October 31, 2026

- After a Celtics practice on Friday, October 30, head coach Joe Mazzulla said he uses AI for conversation and "riffs" — for example, asking what a problem he is wrestling with looks like from a psychological perspective, and what the research and the data say.
- He uses it to test whether his processes are efficient: practice planning, the halftime film process, pregame preparation, and whether film sessions build player retention and understanding.
- Mazzulla said the platform tests processes coaches assume are right, and that there is "a more scientific, a more efficient way of going about how to do things."

What impact AI is having on the economy

Up to 5 stories. 3 found today.

South Korea exports nearly double in October, strongest growth since 1974

Reuters — November 1, 2026

- Exports rose 93.7% year-on-year to $115.28 billion, the strongest gain since January 1974, beating a 93.2% Reuters poll forecast.
- Semiconductor sales jumped 259.4% on continued facility investment by global big-tech firms competing for AI industry leadership; computer sales surged 496.6% on AI server demand.
- Imports rose 36.0% to $72.78 billion, leaving a $42.50 billion trade surplus.

Big Tech returns smallest share of cash to shareholders in 15 years, given AI spending

Reuters — October 30, 2026

- Microsoft, Alphabet, Amazon, Meta and Oracle returned only 9.3% of operating cash as dividends and buybacks in the first three quarters of 2026, down from 27.4% a year earlier — the smallest share in at least 15 years.
- Operating cash flow rose 29% to a record $542.9 billion, but AI-driven capital spending doubled to $556.9 billion, exceeding that cash for the first time in data back to 2011 and leaving a $14 billion combined free-cash-flow deficit.
- Buybacks fell 83% to $13.6 billion; Alphabet and Meta repurchased no shares in 2026. The headline link goes to a carrier page carrying the Reuters report.

Nasdaq 100 Falls 3% as Earnings Stoke AI Reckoning: Markets Wrap

Bloomberg — October 31, 2026

- The Nasdaq 100 fell about 3% as another batch of disappointing tech results intensified the rout, with traders questioning the payoff from AI investments; Intel sank 28% and Amazon dropped amid greater capital spending.
- The core advertising, consumer and retail businesses propping up a collective $750

billion in AI spending this year are showing signs of slowing, and in some cases being cannibalised by AI itself.
- The Nasdaq 100 had already wiped out more than $1.2 trillion in market capitalisation in October, with analysts warning of “mid-cycle capital expenditures indigestion” despite robust AI demand. The headline link goes to a carrier page carrying the Bloomberg report.

What impact AI is having on states (AZ, NV, CA, OR, WA)

Up to 5 stories. 3 found today.

Why AI data centers near Arizona bases are raising security questions

Arizona's Family — October 30, 2026

- The Air Force is proposing AI data centers on five bases, including about 300 acres at Davis-Monthan AFB in Tucson; leases would run 50 years, and the government may but need not buy the services or power. The Army said the use includes drone swarms and advanced simulations.
- Security expert Roberto Gonzalez (San Jose State) warned private firms operating on bases create espionage, sabotage, and vulnerability risks, and questioned vetting of the first two firms — Carlyle Group and CyrusOne (KKR/BlackRock).
- The story also notes growing opposition to Menlo Digital's Ahwatukee project (five two-story buildings, 1 million sq ft, 38 acres) and a separate project near Luke AFB that received a Maricopa County military compatibility permit.

Character.AI moves ahead with asset sale over states' objections

Reuters — October 30, 2026

- US Bankruptcy Judge Brendan Shannon on Friday (October 30) approved bidding

procedures, overruling objections from state attorneys general who argued the auction unfairly favors Disney; Disney's initial bid is $20 million for a non-exclusive license to Character.AI chatbot technology — not the platform, user data, or chat history.

- Attorneys general for 41 US states objected; Disney hired 66 of Character.AI's 86 employees before the bankruptcy, including its ex-CEO, expecting $180 million in pay over three years; states and plaintiffs allege the chatbots pushed children to suicide and self-harm.
- Shannon did not approve Disney/employee legal releases (still challengeable later), said he would likely appoint a privacy ombudsman over children's chat records; Character.AI aims to return to court November 30 for sale approval.

Election Day voters in 13 states to decide the fate of data centers in their backyards

New York Post — October 30, 2026

- 41 data-center-related measures are on November ballots in 13 states (Ballotpedia); about 3,172 active data centers nationally, 5,098 in pipeline (Cleanview).
- California: one measure in Alhambra which would prohibit data centers in the city. Nevada: one measure that would allow data centers within the Eldorado Valley Transfer Area.
- Bipartisan backlash over electricity, water, and land; September Pew poll: 54% say data centers are bad for the environment (up from 39% in January), 50% bad for home energy costs; $137.6 million spent on data-center ads this cycle, Democrats 77% (AdImpact).

Carnivore

Up to 5 stories. 3 found today.

Gallbladder Pain After Starting Carnivore: Normal or Not?

Carnivore Weekly — October 31, 2026

- A dull ache under the right ribs after a ribeye is described as common in week two of starting carnivore.
- Sharp pain that lasts for hours is described as not normal — the post sets out the difference between the two. The headline link goes to the Carnivore Weekly home page, whose Latest listing carries this post by date and title.

First Week of Carnivore After 60: The Shopping List

Carnivore Weekly — October 30, 2026

- A first-week plan for someone starting carnivore at 60 or beyond, built around one short grocery trip.
- No apps, no macros math, and no 40-item list — seven days of meals from that one trip. The headline link goes to the Carnivore Weekly home page, whose Latest listing carries this post by date and title.

Salt on Carnivore When You Take Blood Pressure Pills

Carnivore Weekly — October 29, 2026

- Standard carnivore advice is to add more salt, but that advice does not address people on blood pressure medication.
- The post covers what readers who take a water pill (diuretic) run into with salt on carnivore. The headline link goes to the Carnivore Weekly home page, whose Latest listing carries this post by date and title.

Payson, AZ

Up to 5 stories. 2 found today.

Halloween storms move across Phoenix and Arizona with flooding expected

The Arizona Republic — October 31, 2026

- NWS Flagstaff, in an October 31 entry: “The heaviest rainfall is expected along and south of the Mogollon Rim, including areas near Prescott, Flagstaff, Payson, Heber-Overgaard, and Show Low” — with “Never drive through flooded roadways.”
- The first system moved through October 30 dropping 0.1 to more than 1 inch around metro Phoenix; rain was expected to continue November 1, with a marginal severe risk Sunday, the main hazard 60 mph gusts and a non-zero isolated tornado threat.
- On October 31, SRP released 3,800 cfs from Granite Reef Diversion Dam (up from 1,650 cfs), flooding low-water crossings on the Salt River upstream of Tempe Town Lake; firefighters rescued 6 people from 4 vehicles in a wash on October 30, plus a swift-water rescue in Scottsdale.

Arizona weather forecast: Storms hit Phoenix ahead of Halloween weekend washout

FOX 10 Phoenix — October 30, 2026

- “In the High Country, precipitation has begun breaking up. Scattered showers remain along the Mogollon Rim and extend up toward Flagstaff.”
- Sunday is expected to be a washout, heavy rain Sunday morning through afternoon from a larger trough / atmospheric disturbance.
- NWS river-flooding concerns from the combined Friday + Sunday rain, e.g. Wet Beaver Creek in Rimrock forecast to reach moderate flood levels.

Committee approves

Solar

Up to 5 stories, with subsections Panels and Battery.

Panels

Melton solar farm despite

concerns

BBC News — October 30, 2026

- Melton Borough Council councillors unanimously approved, with reluctance, a solar farm on land east of Waltham Road, Freeby, Leicestershire, spanning 81 hectares (200.2 acres).
- Applicant Downing Renewable Developments said it would produce up to 42 MW, enough electricity for about 10,000 homes, and be decommissioned in about 42 years.
- Councillors said August 2026 National Planning Policy Framework changes — giving "substantial weight" to energy security, economic development and net zero — tied their hands, despite resident opposition over industrialisation of historic landscape. The headline link goes to a carrier page carrying the BBC News story.

Up to 5 stories. 1 found today.

Battery

Battery storage in New York

NPR — October 29, 2026

- New York has only 80 MW of battery storage, vs California's more than 21 GW installed mostly in the past 7 years, despite needing storage to deliver solar/wind power on demand.
- Grassroots opposition after 2023 Suffolk County battery fires has made New York home to more than 80% of U.S. moratoriums on new battery facilities.
- Eight grid battery projects won state contracts in September, adding almost 1 GW by 2030, under NYSERDA market-based incentives that repay operators / protect the public — expected to be cheaper than gas peaker plants and put downward pressure on prices.

About this page

My Daily Review is built

from Clay's subjects list. Each subject carries a number — the most stories for that subject that day; a new subject starts at 5. Fewer are shown when fewer real stories are found, and a subject with no real news that day says so. Stories come from the named source list Clay picked on October 23, 2026 — 44 sources; each story was opened and checked before use, and each story names its source and its date, with the headline linking to the full story. No one source carries more than a quarter of the stories on the page.

This page was built on Sunday, November 1, 2026, for the four days October 29–November 1, 2026, with each story carried once across those days.
