Last night's KPIs — Friday, November 13, 2026

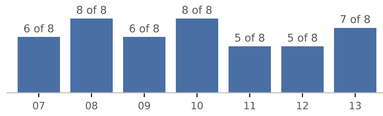
Problems found

One run left no record: Daily walk watch.

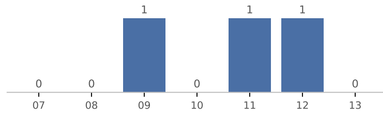
The counts

Each line: last night, and the last 7 nights (November 07 to November 13, oldest first).

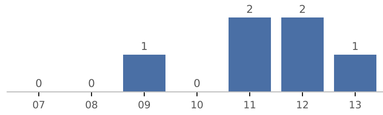
Finished by 5:00 AM — last night: 7 of 8



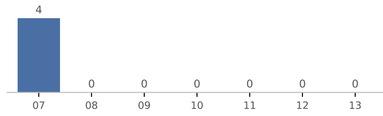
Failed runs — last night: 0



Runs with no record — last night: 1

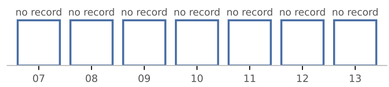


Retries — last night: 0



Mismatch count — last night: 0

Reply gate — stopped replies — last night: no record



The runs — one slice for every run in the set, numbered to match the list

1. **Daily walk watch — no record**

   No verify record for the night was found.

2. **Morning Scroll chain — finished**

   The scheduler's recorded outcome for the briefing run says failed and the briefing run's own two chain verify logs (034456 and 040127) say FAIL on edition-page download errors (HTTP 308/403, no file shown to differ); the chain's dated verify log from the 04:28 re-run says PASS and its finish line stands in the completion pile; the member is counted on the verify record (PASS).

3. **Healthcare providers job — finished**

4. **Yard and estate sales — finished**

5. **Steward's Ledger — finished**

   The scheduler's recorded outcome says failed and the worker reported batch verify VERDICT: FAIL on HTTP 404 for the retired claypnw.github.io addresses; the same verify log's last VERDICT line, after the checker's address was set to the Cloudflare address, says PASS and the state file was updated to Edition 33; the member is counted on the verify record (PASS).

6. **GitHub billing watch — finished**

7. **Morning briefing — finished**

   The scheduler's recorded outcome says failed and the worker reported the work incomplete because the chain --finish verdict was FAIL twice in the briefing run; the briefing's verify record, its finish line in the completion pile (not an ERROR line), stands as a finish line carrying Mismatch count today: 0, and the chain's later dated verify log says PASS; the member is counted on the verify record (PASS).

8. **Daily escrow update — finished**

No record for yesterday

Yesterday's Discussion Temperature

12:51 — the Cloudflare Connect to Git steps for the Scroll move — NOT MET: the instructions named a step that was not on his screen, so he had to correct them and the work took far longer
and 5 more line(s)

All counts read from the night record of 2026-11-13 and the night records of the earlier nights (2026-11-07, 2026-11-08, 2026-11-09, 2026-11-10, 2026-11-11, 2026-11-12), in /home/hatch/workspace/goals/morning-agenda-briefing/hidden_files/morning-kpi-records, and from the family photo store /home/hatch/workspace/family-photo-site/access-counts/daily-counts.csv. The reply gate counts read from the gate count files in /home/hatch/workspace/morning-kpi-page.
