Hourly status report

Thursday, October 29, 2026 — 6:00 PM Arizona time

Outstanding work

Errors — 0

No error or failed check stands open in this run.

Cannot move — 0

No item stands blocked in this run.

Waiting on Clay — 0

No item waits on Clay in this run.

Running now

1. **This hourly status report**
   This run is building the 6:00 PM report and publishing it to the menu site.

Mine to do

2. **Build the 149 gates**
   This work comes first when nothing else is running. The counts stand in four groups:

   - Done in full — 21: the check stands inside a real production job, the job calls it on every run, and it can stop that job; proven at a real run.
   - Wired, proof still owed — 3: the check is written into a production job's steps, and that job has not run with it yet, so there is no live proof yet. These are gates 113, 114, and 118.
   - Re-homed — 37: the rule is already kept by the tool that does the work itself, so no separate check was built; nothing is owed on these.
   - Nothing to do — 88: the rule guards work done by hand in chat; no production program does that work, and a check can only be called by a program, so there is nothing to build and nothing pending.

   Next step: today's 4:54 PM Hearth check-in ran with no new items, so gates 113 and 114 did not run and their proof is still owed; the next Hearth check-in is November 1 at 4:54 PM, and proof there is owed only if that run adds items and publishes. Gate 118: the November 1 blood pressure run at 9:00 AM.

Records this page rests on

The open work list (~/workspace/OPEN-WORK.md), read whole in this run: the 149 gates (item 6) is the only open numbered item, and every Waiting on Clay item stands closed. Gate counts unchanged: the completion count reads 21. The evening gate audit (2026-10-29) records the Hearth check-in ran today at 4:54 PM and succeeded with no new items, so gates 113 and 114 did not run and their proof stays owed; gate 118's next run is November 1 at 9:00 AM. Stale check: today's Gilded Pages, Steward's Ledger (Edition 18), Morning Scroll, yard sales, and escrow logs each end VERDICT: PASS, and the finish pile's publish error line is superseded by the Scroll chain finish line (edition published, chain VERDICT: PASS), so no solved fault stands on this page. Live check: one run in flight at check time (this report).
