Last night at a glance

Wednesday, November 11, 2026 — everything from midnight to now, on two pages

Last night's jobs, by their records

5 of 8 finished by 5:00 AM

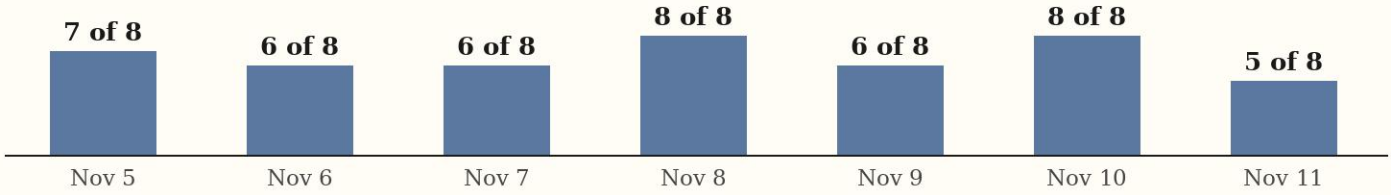

1 **Failed**
Morning briefing — failed at 3:39 AM: the Scroll chain stopped at gate item 104 on a GitHub rate limit (HTTP 403); the edition was built but not published.

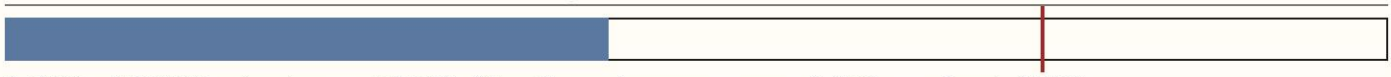

2 **No record**
Morning Scroll chain — no verify record for the night stands; the chain stopped at gate item 104 on the same GitHub 403 rate limit.
Daily walk watch — no run record for the night stands (its last run stands at Nov 10, 4:56 AM).

The parts add up in the open: 5 finished + 1 failed + 2 no record + 0 not finished by 5 = 8 jobs.

Jobs finished by 5:00 AM — the last 7 nights

GitHub minutes used this cycle

1,309 of 3,000 minutes — 43.6%. Month-end guess: near 4,541 — about 151%.

alarm line 75% — 2,250

By site: Report on Muse AI 372, Morning Scroll 343, test stand 233, Gilded Pages 144, Menu 133. The rows shown sum to 1,225; the other 84 minutes stand in repositories with no separate row.

Your health — yesterday, Tuesday November 10

Sleep Not synced in full for Nov 10 — no main-night session starting Nov 10 stands; the latest session is Nov 9, 10:44 PM to Nov 10, 5:14 AM, 6 hours 30 minutes in bed

Steps Not synced in full for Nov 10 — no step count stands; the last complete day is Nov 9, with 4,452 steps

Heart Not synced in full for Nov 10 — last complete day Nov 9: average 58.8, high 95

Weight 171.9 lb — as of Oct 14

Blood pressure 118/66 — as of Oct 18

Page two — the sites, where things stand, and the detail

Who looked at the sites yesterday (GitHub's counts)

Morning Scroll 2 views · Menu 2 views · Report on Muse AI 2 views · Hearth build page 2 views · Gilded Pages 1 view — 1 visitor each. Family photo site: no record for yesterday.

Where things stand now

NOT PUBLISHED: This morning's Scroll edition — built and recorded, not published; the chain stopped at gate item 104 on a GitHub 403 rate limit, and no verify record stands.

STILL OPEN: Healthcare rollout — 236 of 455 worked; 219 entries not yet listed; 15 names wait on phone checks or an admin hold. No calls were made.

Daily production review

Reviewed: Tuesday, November 10, 2026, 12:00 AM to 12:00 AM Arizona time — midnight to midnight. Problems counted: 23. Repeats named: 1 — each repeat carries its change under it.

Repeat 1. A word he cannot place, or a made-up label — camera instructions used names he could not place, with no meaning said first (18:44, NOT MET), plus a coined file label the same day. Seen before: Oct 14, Oct 18, Oct 29, Nov 4, 5, 6, and 8.

Change (different — the Nov 9 scan covered documents, these stands were in talk): a name scan now stands in the Check Before Handover skill — a name stands only if it is the exact name in the record or on his screen and its meaning is said first in plain words; a coined name is removed.

Counted, with no repeat — a count, not a change:

• Repeat check: the other four repeat changes held on Nov 10 — night count read the end state (8 of 8, mismatch 0), no report past the business form, no closing waited for his word, counts matched their records.

• Talk: a direct meat opinion came out on both sides with a clinician talk he had rejected; diverticulitis heard as diabetes (10:50). A new Cameras folder stood in the plan without his word first (14:16).

• Talk: a short file answer ran long after he said less is more (15:21). Camera download steps named a thing not on his screen, no exact file name first, steps left out (15:43).

• Talk: the camera config answer came in a form he could not read and left him the editing work (17:29). He was asked again for an address he had already given (18:07).

• Yard sales: first three verify runs failed on deploy lag, then passed. Connectors report: first build failed on the new connector's missing data, then passed at 8 pages.

• Maker finds: gate 91 runner again printed no check (exit 2); checks by hand. Health Connect: Nov 9 a fragment all day, complete at 7:31 PM (4,452 steps, sleep 6h30).

• Price-drop: 13 Amazon items NOT CHECKED (receipts name only categories). Filament: Amazon blocked, marked not checked, retry Nov 11.

• GitHub publish: three sends failed, token not set, nothing sent; key-program publishes passed. A 12:30 AM deploy letter carried only a support file — live page current, no fix owed.

• Story player: seven separate boxes built instead of the one black bar he approved; the failed screenshot check was passed over and he rejected the look. Corrected bar built later that day.

• Work now: refresh re-derived the whole schedule per tap (about 84 seconds), a later tap timed out; he named the stored-table design, built that day. The five-minute open-work watch (113 passes, about 68 million tokens read) was replaced at his order.

• Morning Scroll: the menu opened the PDF edition (no player buttons) while the web edition had them — two versions at once; all 47 PDFs removed, menu fixed that day.

• My Daily Review player: repository copy proven, live fetches still served the older build, and the closing summary told him it had flipped; a later status confirmed the flip.

• Voice call: television lines behind him were answered as if he had asked them. Yard reporting: first publish commit ids stood wrong, corrected the same day. Camera walk-through: old sheet, a wrong step, and three wrong file names — he stopped the work and ordered a tested rewrite.

Small lines

Reply gate: the Nov 10 count could not be settled from the chat record — not checked, none guessed.

Health Connect: Nov 10 is not in in full — no step count stands; the last complete day is Nov 9.

Every number rests on the night's own records and this morning's verify programs.
