# Hourly status report

Wednesday, October 28, 2026 — 4:00 PM Arizona time

## Outstanding work

## Errors — 0

No error or failed check stands open in this run.

## Cannot move — 0

No item stands blocked in this run.

## Waiting on Clay — 0

No item waits on Clay in this run.

## Running now

1. **This hourly status report**
   Checked live in this run: no helper agent was running, and no other work was running. This report is the work running at this minute.

## Mine to do

2. **Build the 149 gates**
   This work comes first when nothing else is running. The counts stand in four groups:

   - Done in full — 20: the check stands inside a real production job, the job calls it on every run, and it can stop that job; proven at a real run. Thirteen more gates gained live proof in today's day audit.
   - Wired, proof still owed — 4: the check is written into a production job's steps, and that job has not run with it yet, so there is no live proof yet. These are gates 112, 113, 114, and 118.
   - Re-homed — 37: the rule is already kept by the tool that does the work itself, so no separate check was built; nothing is owed on these.
   - Nothing to do — 88: the rule guards work done by hand in chat; no production program does that work, and a check can only be called by a program, so there is nothing to build and nothing pending.

   Next step: gate 112 is judged at the sales run on October 29, gates 113 and 114 at the Hearth check-in on October 29, and gate 118 at the blood pressure run on November 1.

## Records this page rests on

The open work list (~/workspace/OPEN-WORK.md), read whole in this run: the 149 gates (item 6) is the only open numbered item, and every Waiting on Clay item in that list stands closed. Item 6's latest progress line of today is the day audit (~/workspace/gate-builds/watch-audit-2026-10-28-day.md), and the gates completion count reads 20. Stale check in this run: the Gilded Pages log for today ends VERDICT: PASS, the Steward's Ledger log for today ends VERDICT: PASS, the Morning Scroll check for today ends VERDICT: PASS, and the yard sales check for today ends VERDICT: PASS, so no solved fault stands on this page. The build_and_manifest error line in the finish pile is superseded by the Scroll chain finish line (edition published, chain VERDICT: PASS) in the same pile. A gate 112 recheck landed at about 3:20 PM today; its own file states it does not by itself move the count, so the counts above stand. Checked live in this run: the scheduler showed 1 run running (this report) and 0 runs waiting in line, and no helper agent was running.
