Last night at a glance

Friday, November 13, 2026 — everything from midnight to now, on two pages

Last night's jobs, by their records

7 of 8 finished by 5:00 AM

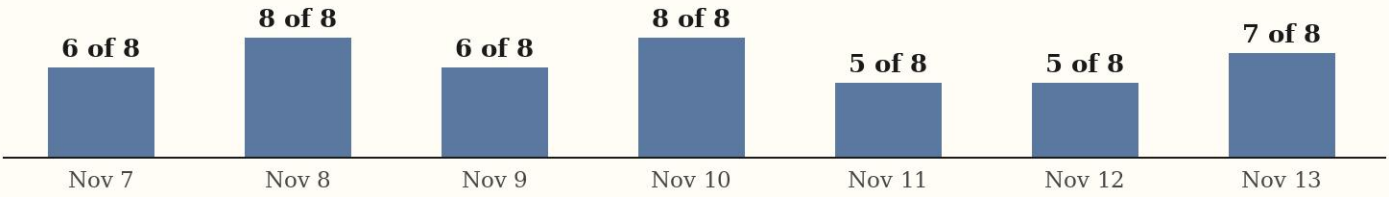

1 **No record**
Daily walk watch — no run record for the night stands (the job stands disabled; its last run stands at Nov 10, 4:56 AM).

7 **Finished, three with a source note**
Morning Scroll chain, Steward's Ledger, and Morning briefing — the scheduler marked these failed, and each stands counted finished on its own verify record (the Scroll chain re-run at 4:28 AM says PASS; the Ledger log's last verdict, after its checker was set to the new Cloudflare address, says PASS; the briefing's finish line stands in the pile with mismatch 0).

The parts add up in the open: 7 finished + 0 failed + 1 no record + 0 not finished by 5 = 8 jobs.

Jobs finished by 5:00 AM — the last 7 nights

GitHub minutes used this cycle

1,574 of 3,000 minutes — 52.47%. Month-end guess: near 4,472 — about 149%.

alarm line 75% — 2,250

By site: Report on Muse AI 417, Morning Scroll 391, test stand 268, Gilded Pages 159, Menu 149. The rows shown sum to 1,384; the other 190 minutes stand in repositories with no separate row.

Your health — yesterday, Thursday November 12

Sleep No health watch record for Nov 12 stands in the morning records — the health watches were removed on Nov 11, so Nov 12 is not checked here, not guessed

Steps Last complete day in the watch records stands at Nov 10, with 7,889 steps

Heart Nov 10, the last complete day in the watch records: average 61.3, high 85

Weight 171.9 lb — as of Oct 14

Blood pressure 118/66 — as of Oct 18

Page two — the sites, where things stand, and the detail

Who looked at the sites yesterday (GitHub's counts)

Morning Scroll 7 views · Report on Muse AI 3 views · Gilded Pages 2 views · Hearth build page 2 views · Menu 2 views — 1 visitor each, the Report 2 visitors. Family photo site: no record for yesterday.

Where things stand now

STILL OPEN: Healthcare rollout — 250 of 505 worked; 255 entries not yet listed; 21 names wait on phone checks or an admin hold. No calls were made.

MOVED: The Morning Scroll now stands at its Cloudflare address; yesterday's flip was verified — the old home forwards, and an old edition, a direct PDF, and a direct recording each forward to the same path at the new home.

Daily production review

Reviewed: Thursday, November 12, 2026, 12:00 AM to 12:00 AM Arizona time — midnight to midnight. Problems counted: 33. Repeats named: 0 — each repeat carries its change under it.

Counted, with no repeat — a count, not a change:

• Repeat check: all five repeat changes held — no report or reply name he could not place; the night count read the end state (mismatch 0); no report past the business form (connectors 9 pages); no limit answered after the first roads only; the day's counts matched their records (billing 1,474 = 49.13%, hold 21, gates 149).

• Talk (6, all NOT MET): Cloudflare steps named things not on his screen (12:51); the sign-in loop and a long step list for him to run (14:34); a book instead of a bottom line (15:14); the camera page address made hard (16:00); no summary of what was wanted (16:37); token steps still wrong after the whole screen was given (16:48).

• Night: briefing and Scroll failed 3:28 AM — weather pull, Open-Meteo 429, no edition. Walk watch: no record that night.

• First runs that then passed: healthcare publish (its first report's commit IDs were invented again; real IDs settled by API), connectors builder (3 new connectors had no data). Maker finds: gate 91 runner again no check, by hand, fifth no-fit round.

• Not checked: Amazon in the filament check (third day refused) and in the price-drop watch (13 items, receipts name categories only). My Daily Review recordings were interrupted by a service restart after 4 files; all 12 stood verified in the published edition.

• Mailbox: a download told as under way had not landed (a 3.8 KB fragment only); the Nov 12 downloads died in restarts again and again, the best partial stands at 67%, a denied road stayed denied, and the audit still has not run. A go already given was asked for again, and owned as the agent's mistake.

• Health plan talk: a closing claim of all five answers was wrong (three questions asked were substitutes), and bundled questions drew his stop — one question at a time. Background television was answered as him twice in the morning call.

• GitHub: the Raven's Reach Message Detection workflow failed three times that morning on ChatGPT's posts; no board message was lost, and its push trigger was removed the same day. Two scheduled board checks timed out (15:30 completion not certified; 16:45 ack posted by the next check).

• Batch publisher: two board batches landed in a shadow 'Raven's%20Reach' folder and printed PASS on wrong-path read-backs; the fix was proven on the test stand, the files re-published and read back at the real folder, and the shadow folder deleted and verified gone.

• Cameras: the phone test opened the page with no pictures on any tile (the road is blocked by the browser's own rules, by design); the Start Here page's step 4 named a start file that does not stand on his PC; a 'done' claim for the camera job was withdrawn — only its build step stood done; and a fix publish he approved was blocked because GitHub was not connected in that chat.

• Cloudflare: a plan to move all six sites was stopped — only the tested Scroll was meant; the five-site browser road failed in full (sign-in verification, in the agent's runs and under his own hand); a settlement was claimed that was not settled and its buttons were withdrawn; a key was asked for with steps before its explanation, and the first key's stored copy failed its checks; the previews walk went one screenshot at a time until he objected.

• Billing watch: the family album line said NOT FOUND because the job still named the duplicate he ordered deleted on Nov 11; the working copy stands untouched and the job was fixed and read back the same night.

Small lines

Reply gate: the Nov 12 count could not be settled from the chat record — not checked, none guessed. Every number rests on the night's own records and this morning's verify programs.
