Hourly status report

Friday, October 30, 2026 — 5:00 AM Arizona time

Outstanding work

Errors — 0

No error or failed check stands open in this run.

Cannot move — 0

No item stands blocked in this run.

Waiting on Clay — 0

No item waits on Clay in this run.

Running now

1. **This hourly status report**
   This run is building the 5:00 AM report and publishing it to the menu site.
2. **The morning jobs finished check**
   The scheduler shows this job in flight at this minute; it checks last night's jobs.

Mine to do

3. **Build the 149 gates**
   This work comes first when nothing else is running. The counts stand in four groups:

   - Done in full — 21: the check stands inside a real production job, the job calls it on every run, and it can stop that job; proven at a real run.
   - Wired, proof still owed — 3: the check is written into a production job's steps, and that job has not run with it yet, so there is no live proof yet. These are gates 113, 114, and 118.
   - Re-homed — 37: the rule is already kept by the tool that does the work itself, so no separate check was built; nothing is owed on these.
   - Nothing to do — 88: the rule guards work done by hand in chat; no production program does that work, and a check can only be called by a program, so there is nothing to build and nothing pending.

     Next step: gate 118 is judged at the November 1 blood pressure run at 9:00 AM. Gates 113 and 114 are judged at the November 1 Hearth check-in at 4:54 PM, only if that run adds items and publishes.

Records this page rests on

The open work list (~/workspace/OPEN-WORK.md), read whole in this run: the 149 gates (item 6) is the only open numbered item, and every Waiting on Clay item stands closed. Last night's audit (~/workspace/gate-builds/watch-audit-2026-10-29-night.md) moved no gate; the completion count reads 21. Stale check: today's Gilded Pages, Steward's Ledger (Edition 19), Morning Scroll, yard sales, and escrow logs each end VERDICT: PASS, so no solved fault stands on this page. Live check: the scheduler shows two runs in flight at this minute.
